

Physiologic tooth form and the periodontium

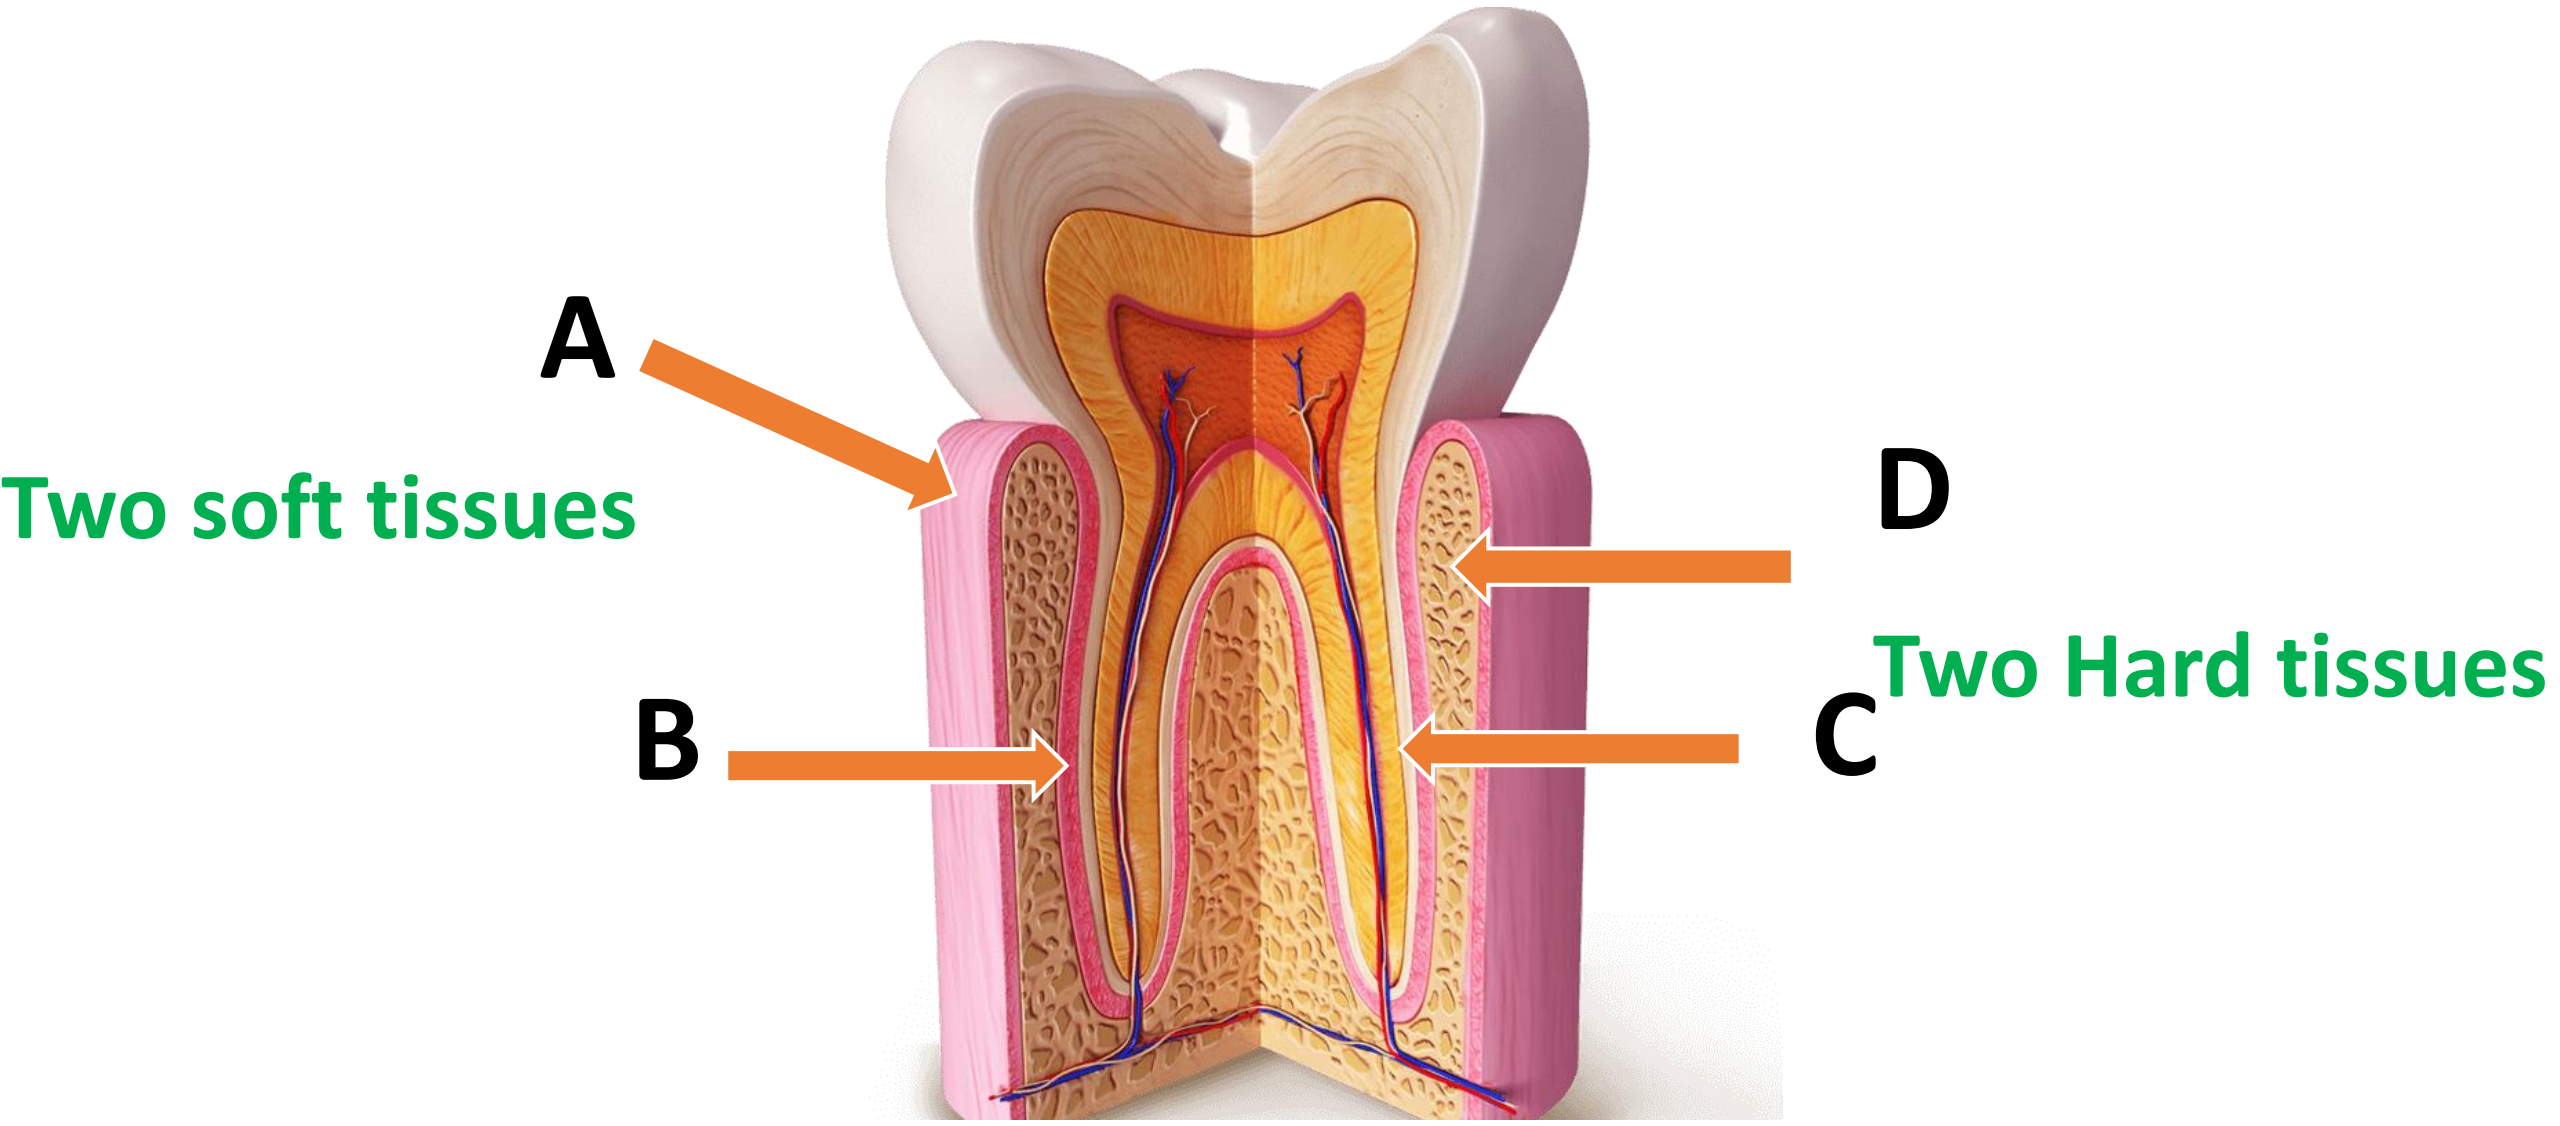

By

Dr. Israa Ahmed Radwan

Dr. Sara Mahmoud

Mention A,B,C and D

A,B,C and D form.....

which picture shows contact point:

A

B

which picture shows broader contact ?

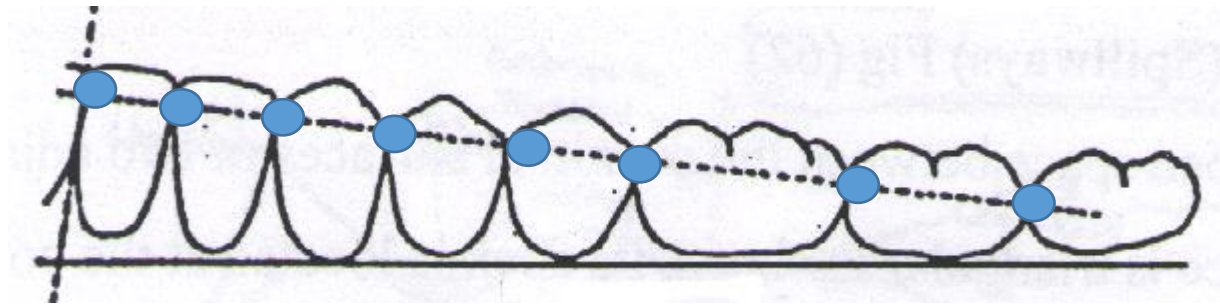

A

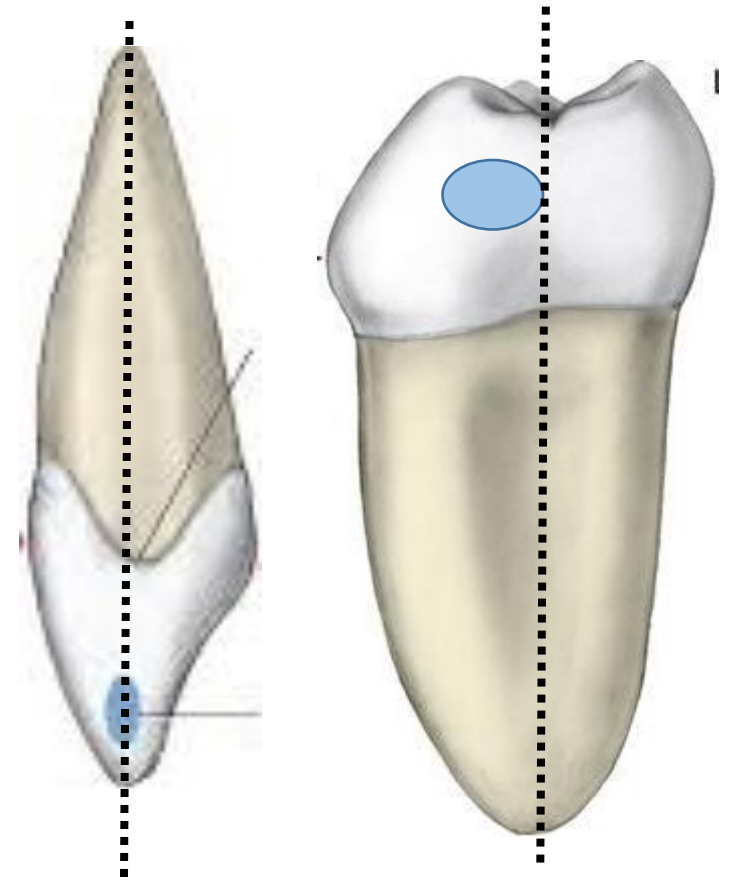

B

what is the normal Position of contact areas?

A) From the facial aspect

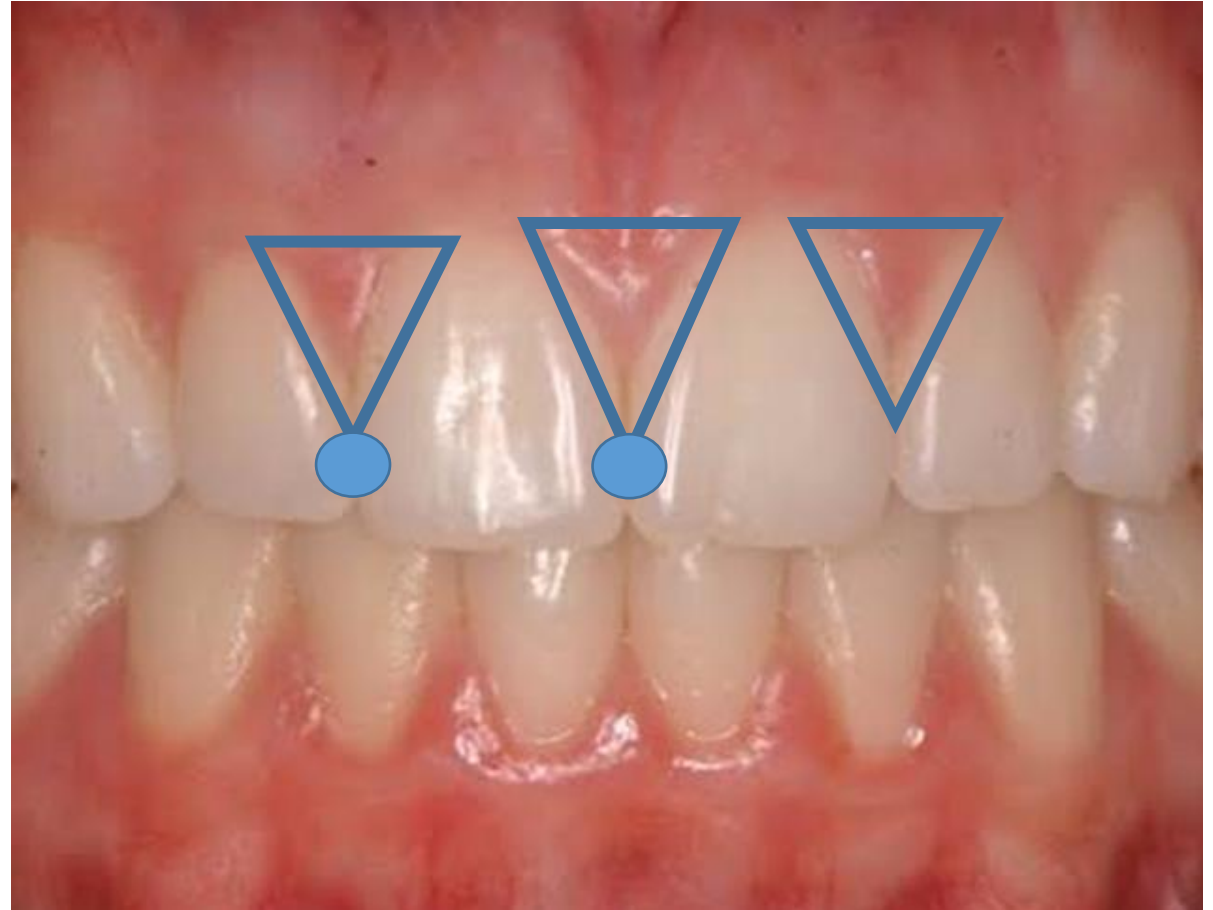

B) From the proximal aspect

what are the sequelae of abnormal contact relation

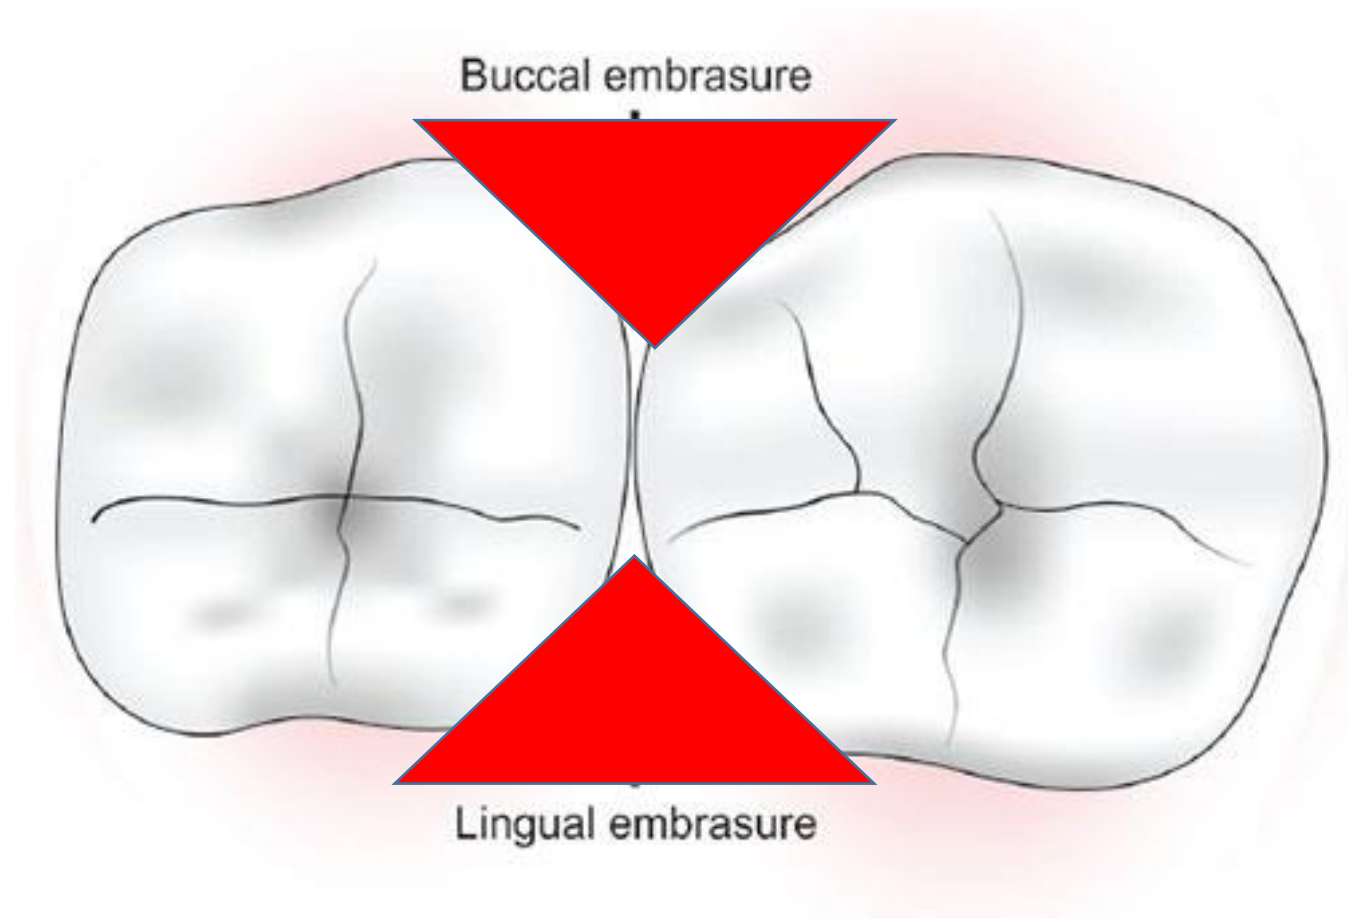

Define Interproximal spaces

What is the significance of Interproximal spaces?

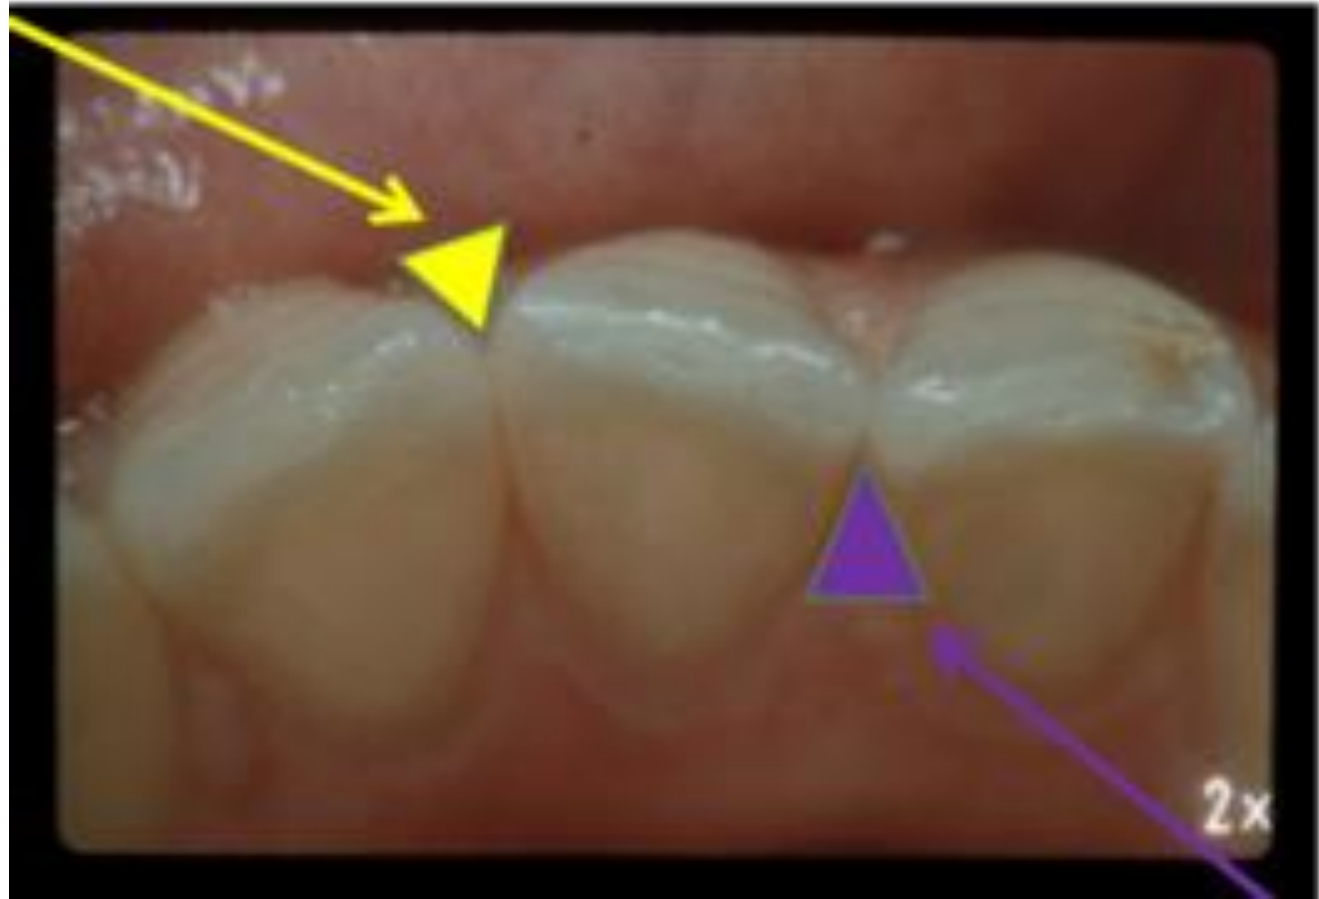

Define Embrasures or spill ways:

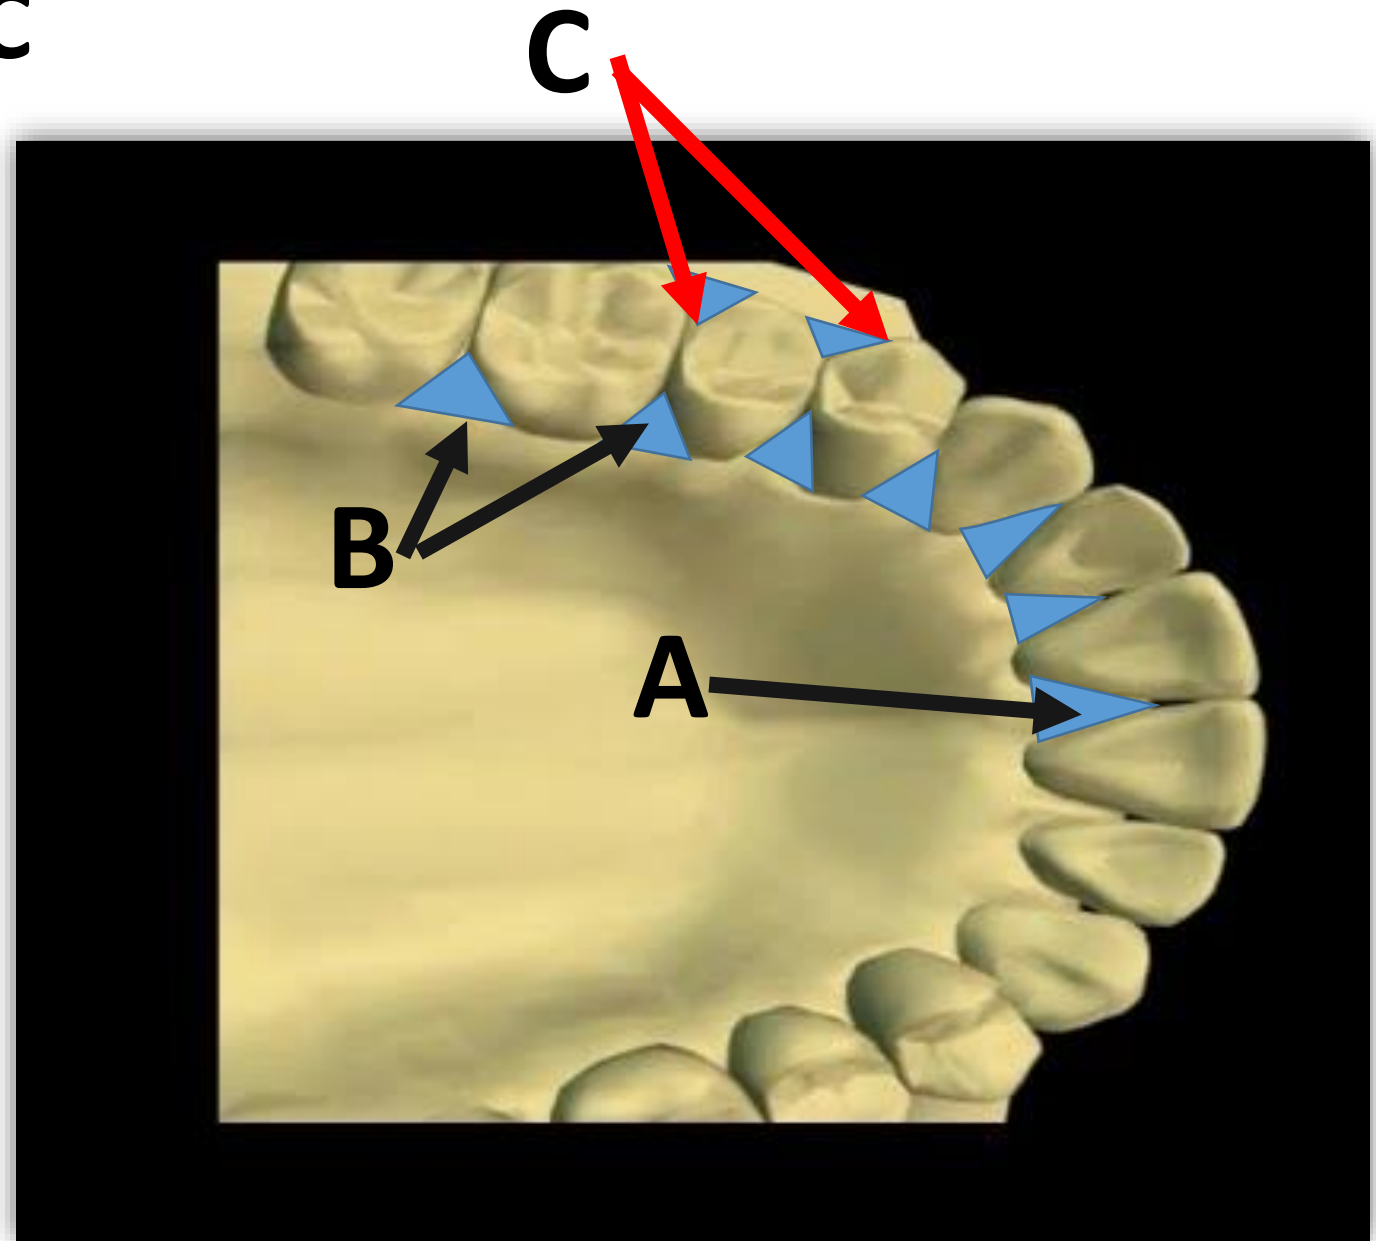

Mention A and B:

A

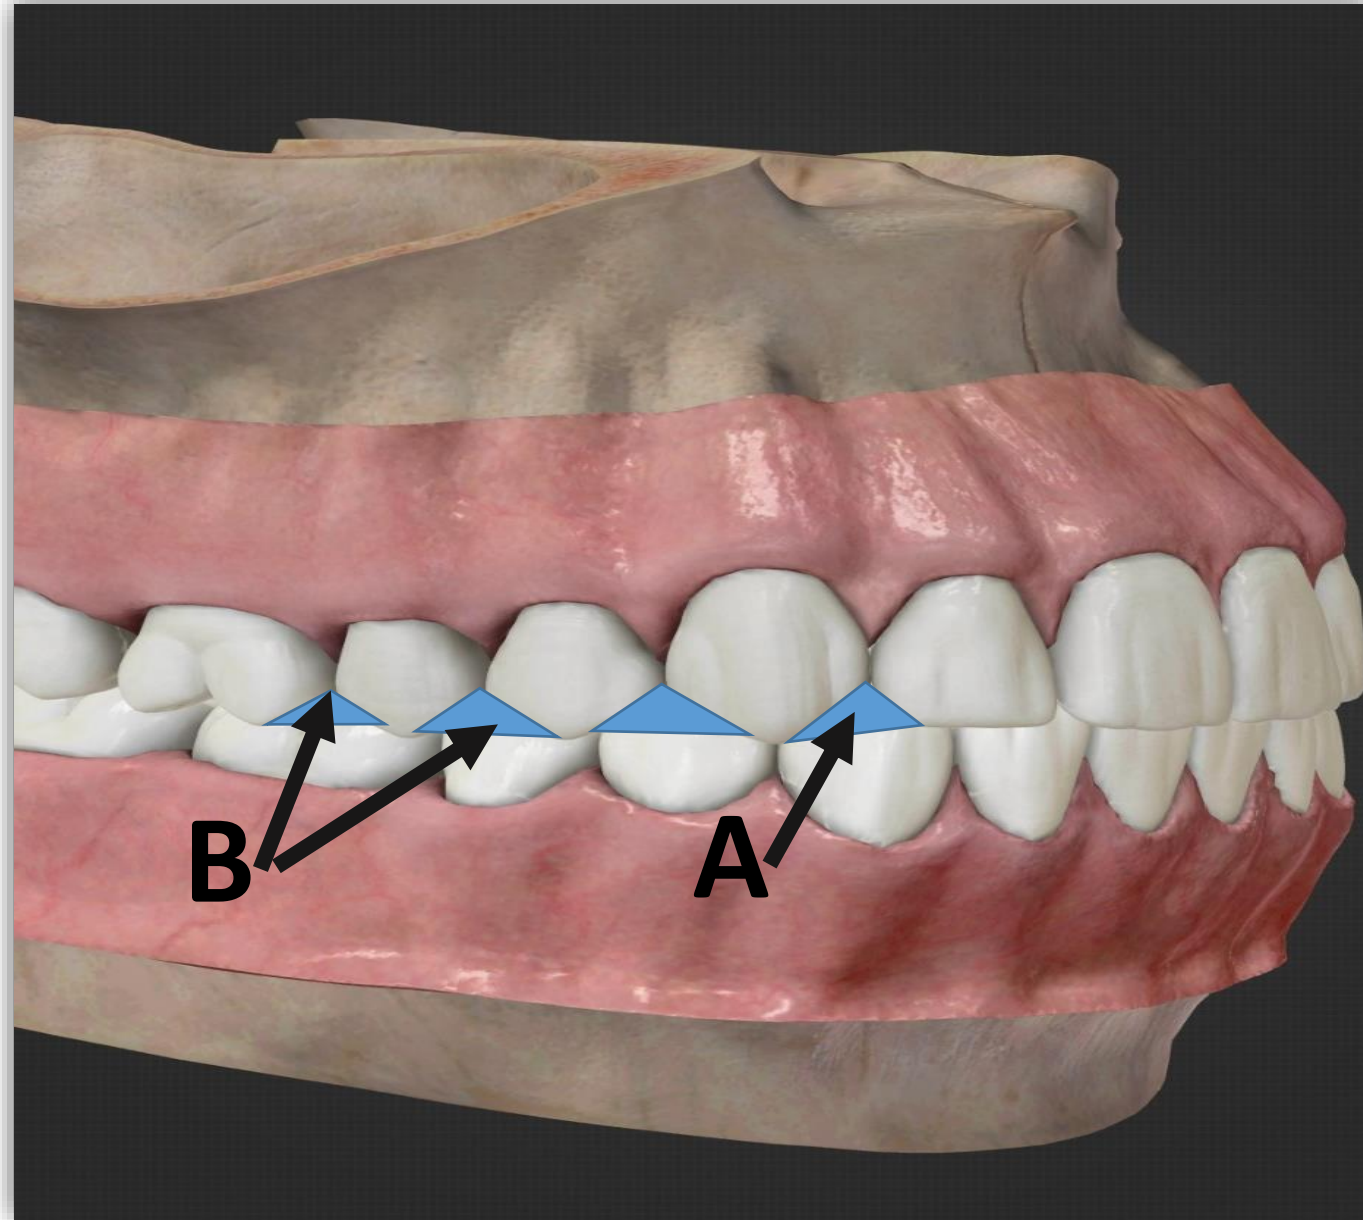

B

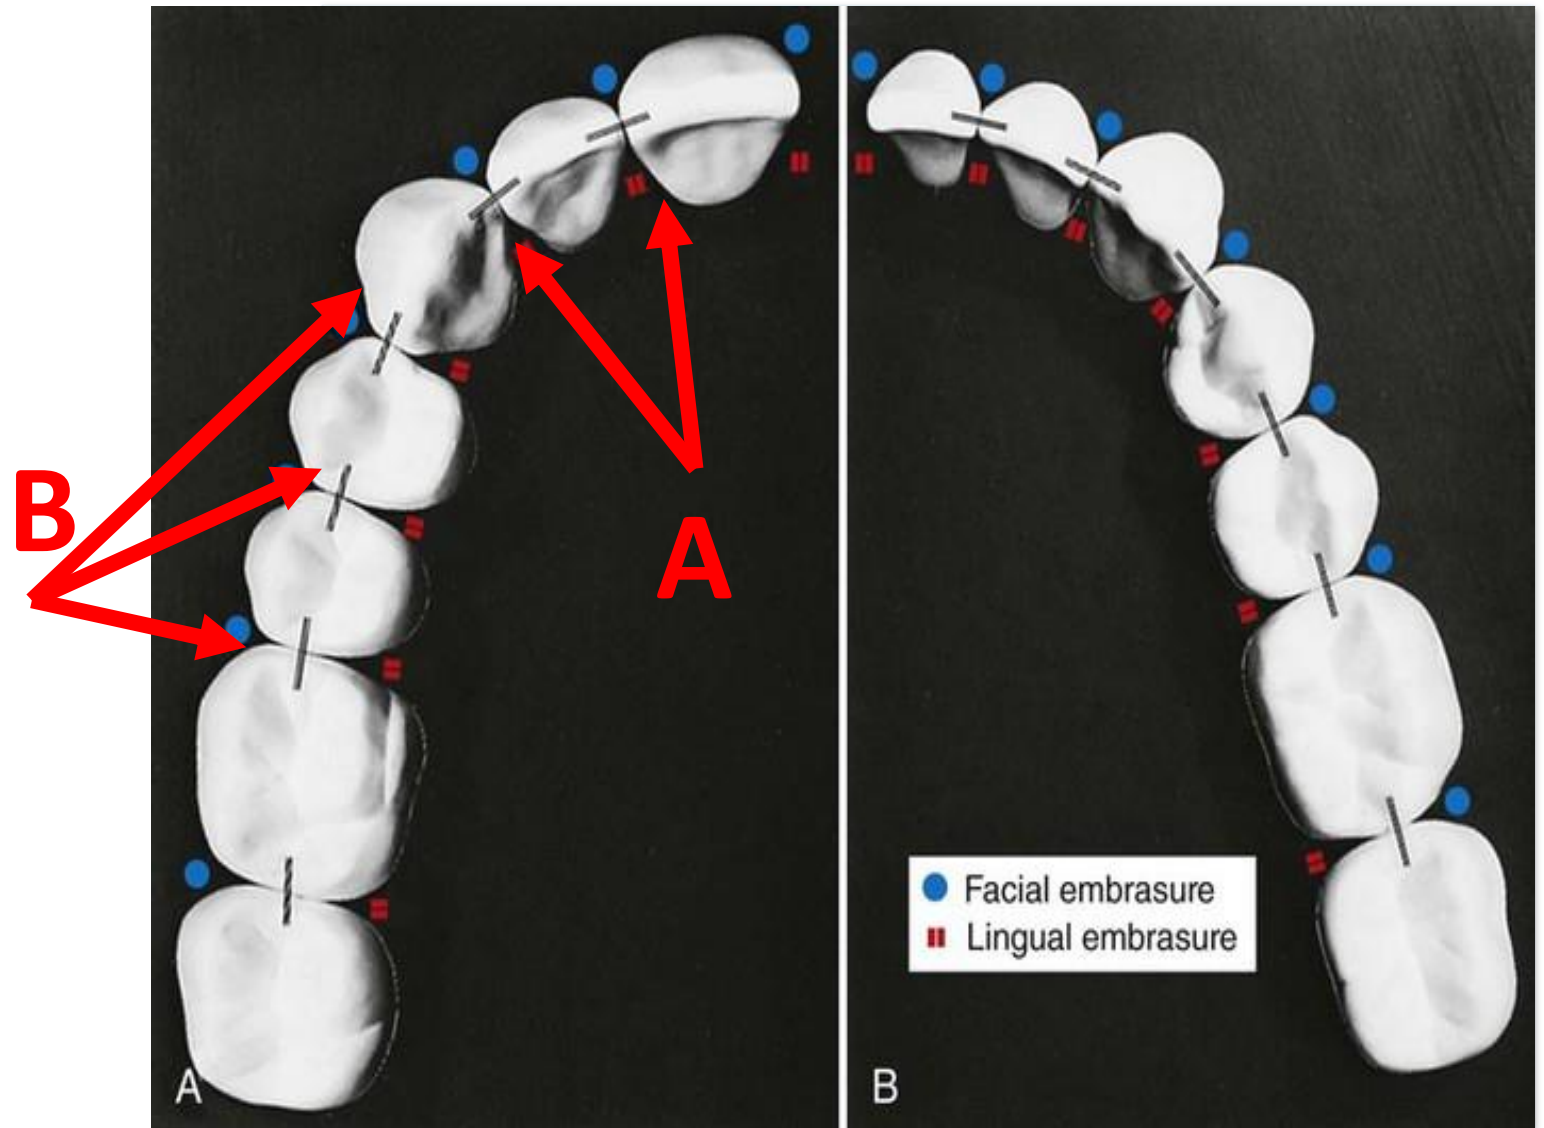

Mention A,B and C

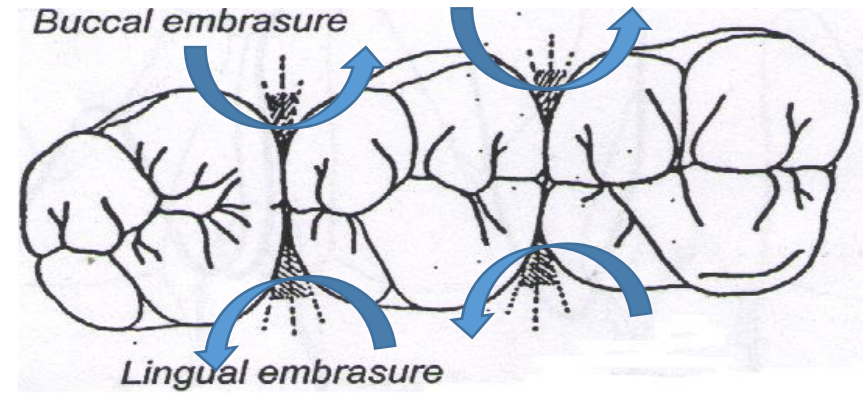

Mention A,B

Mention A and B:

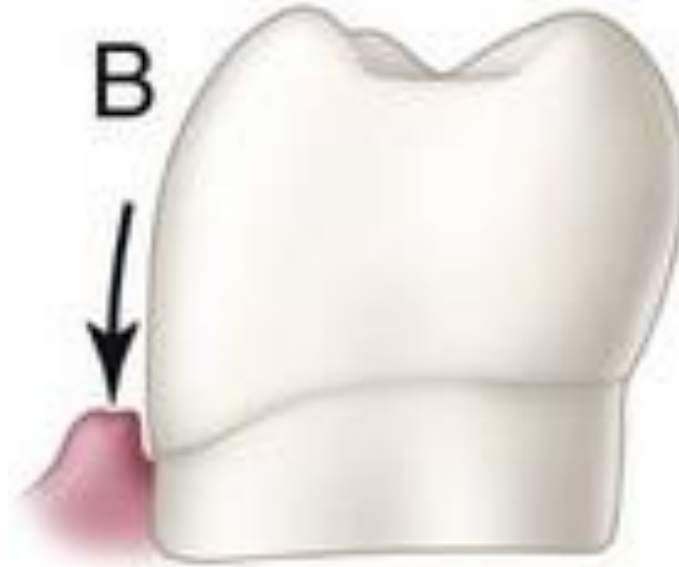

What is the significance of embrasures:

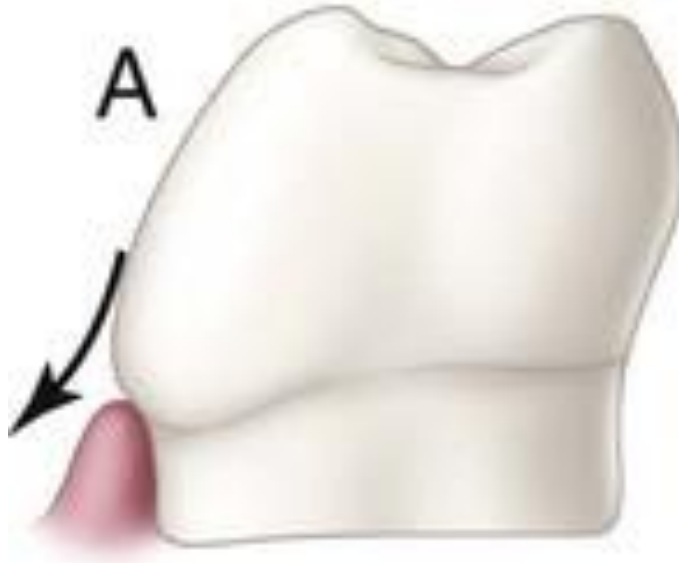

What is the position of facial and lingual contours in A,B and C:

what is the sequela of too small or absent convexity:

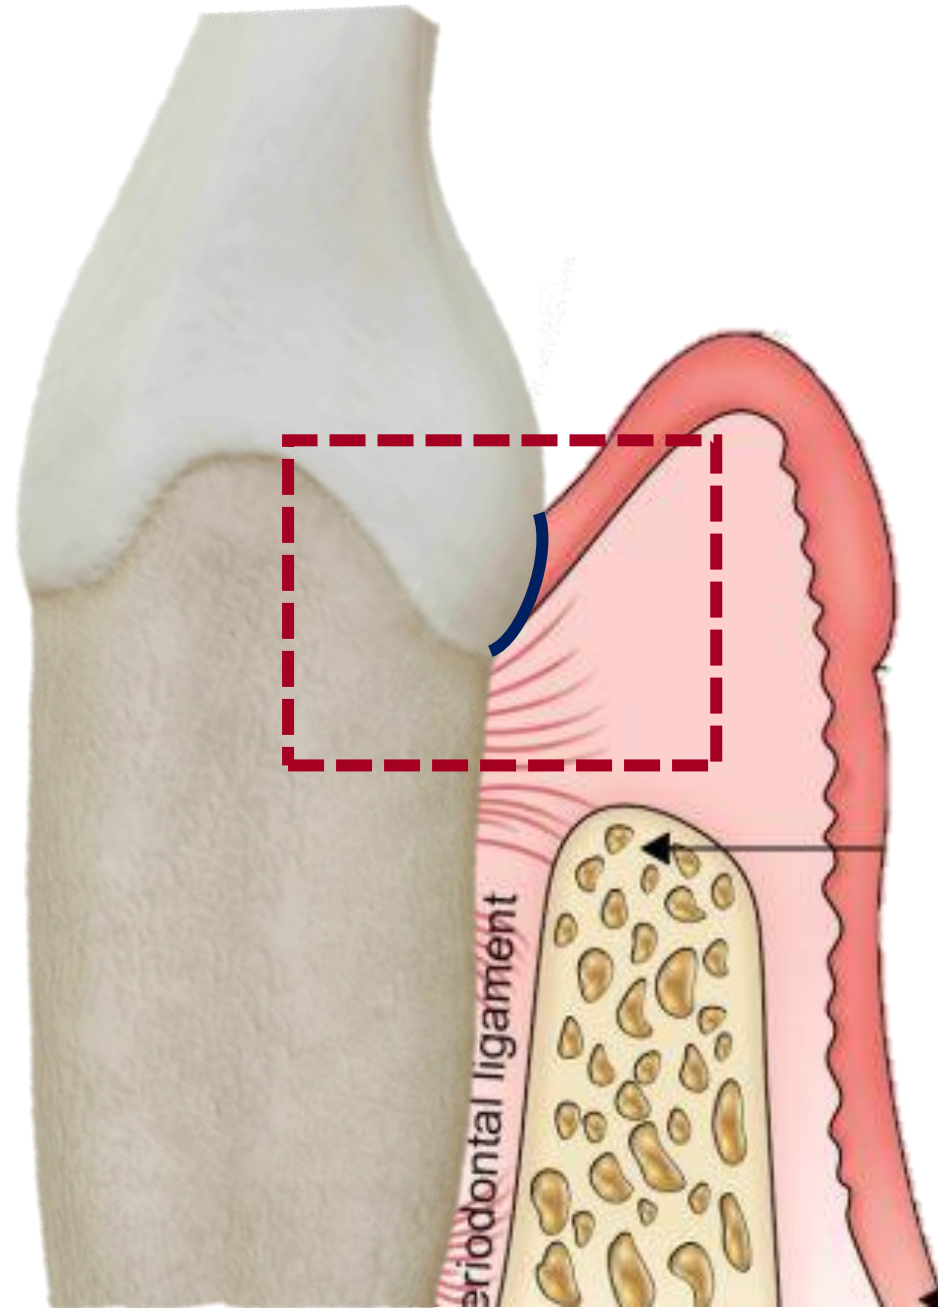

what is the sequela of Too large convexity:

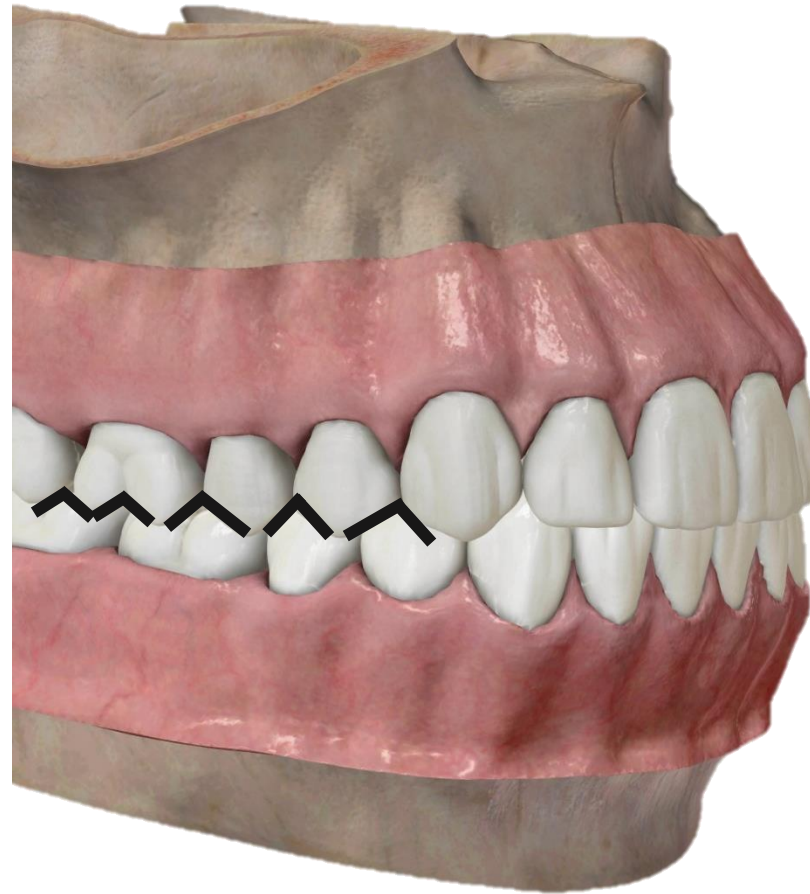

What is the difference in the curvature of the cervical line between A and B

**What is the
Significance of
cervical line
curvature?**

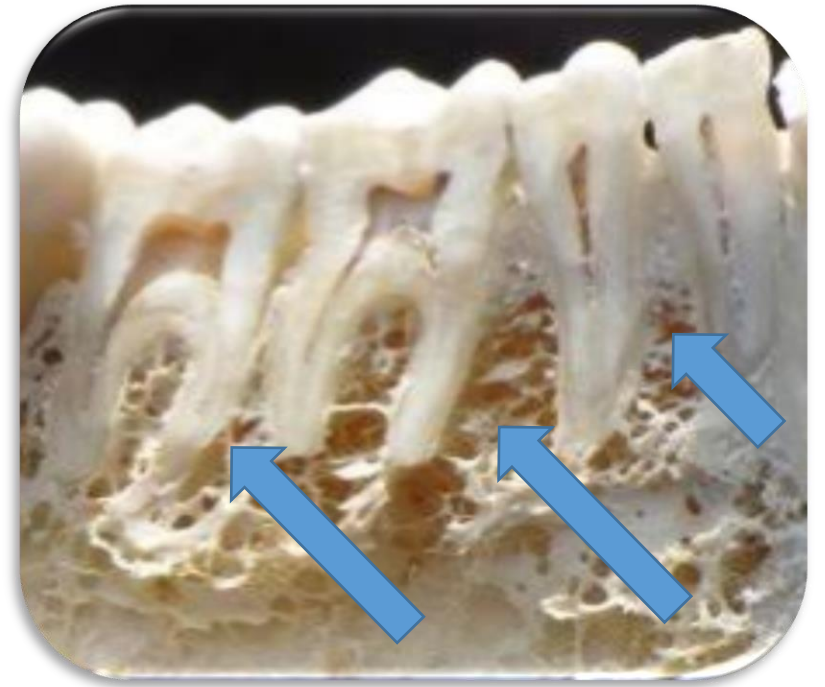

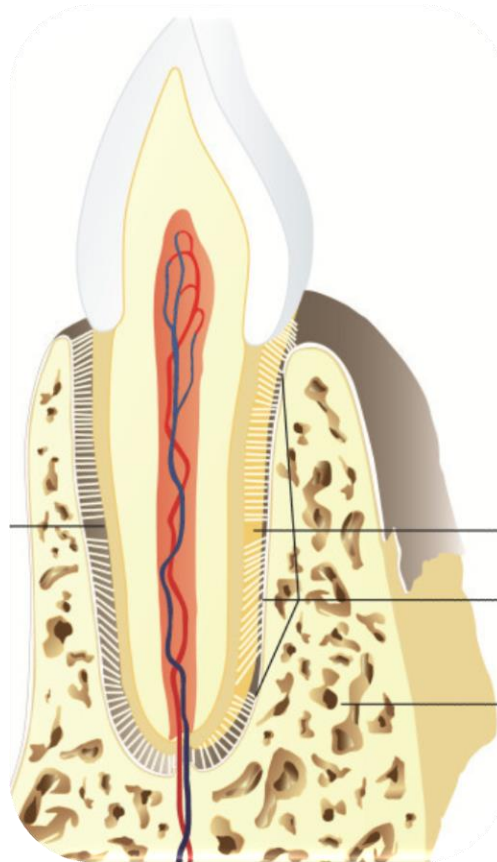

**What is the significance of the shape of the Cusp
in protecting the periodontium**

**What is the significance of
Root Length number and distribution
in protecting the periodontium**

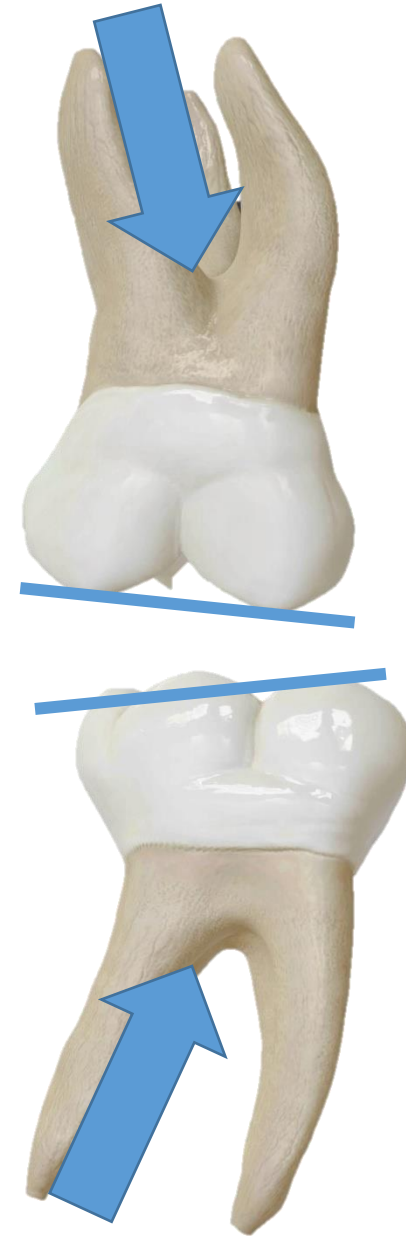

What is the significance of **Root outline** in protecting the periodontium

What is the significance
of **Lingual angulation of
the crown of lower
posterior teeth.**

What is the significance of distal angulation of the crown in protecting the periodontium

Self cleansing ability of the teeth is achieved by:

Thank You
