

roots: single / paired, digital / curved apex

mesial outline: slightly convex

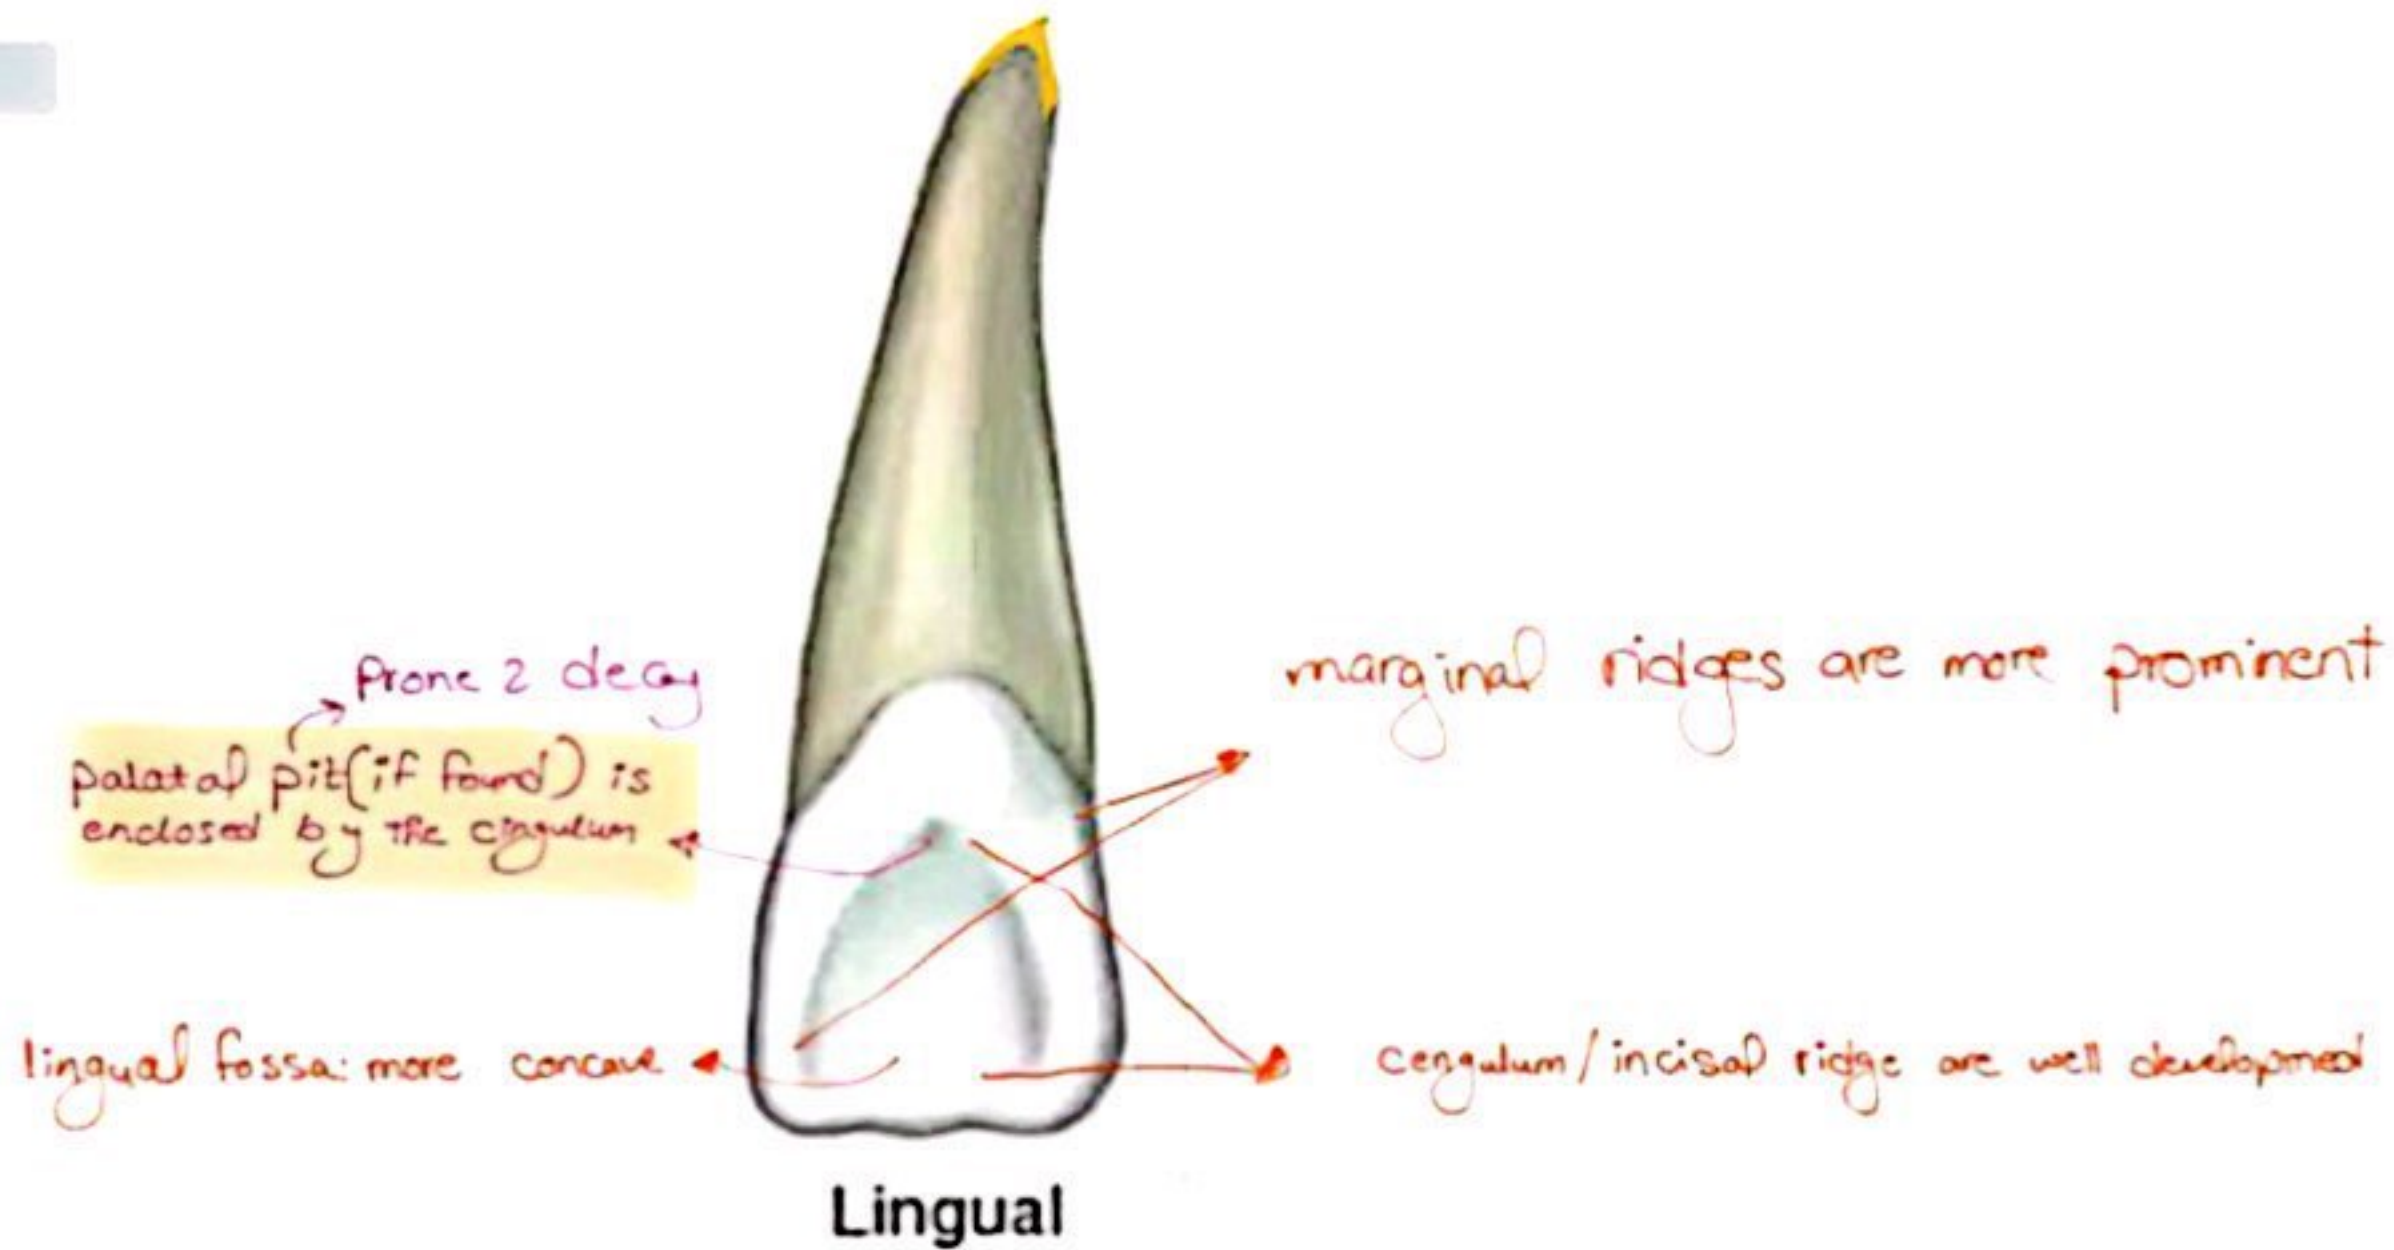

00
Contact area: junction bet middle & middle fs

distal contact more cervicaly
distal outline: more convex

Labial

incisal outline: rounded w/ distal angle 
angle MORE ROUNDED than mesioincisal angle

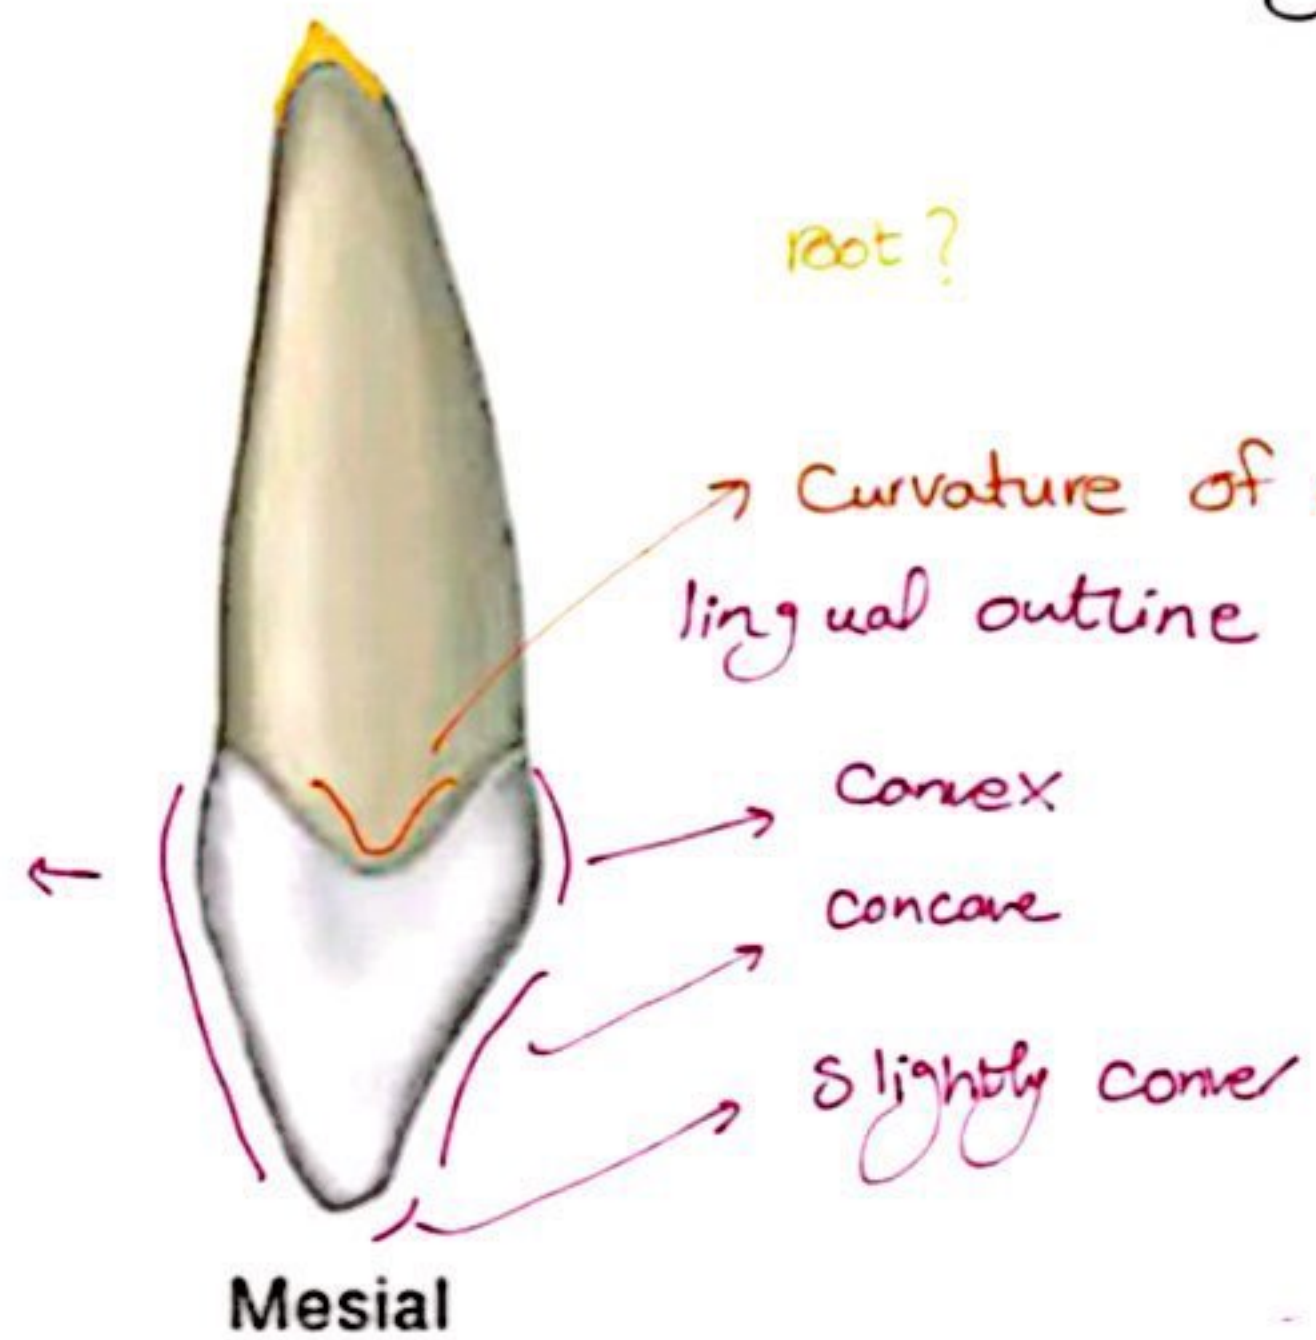

- mamelons are less common & less pronounced than central incisor → حبة نوامق واضع في مركز

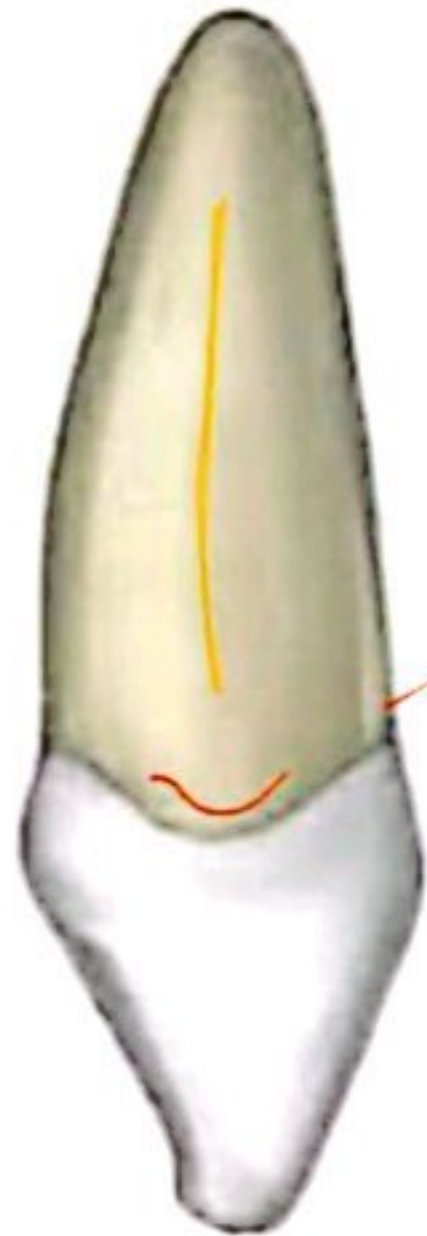

Geometric outline:  Base @ Cervix
apex @ incisal ridge

labial outline =
more convex

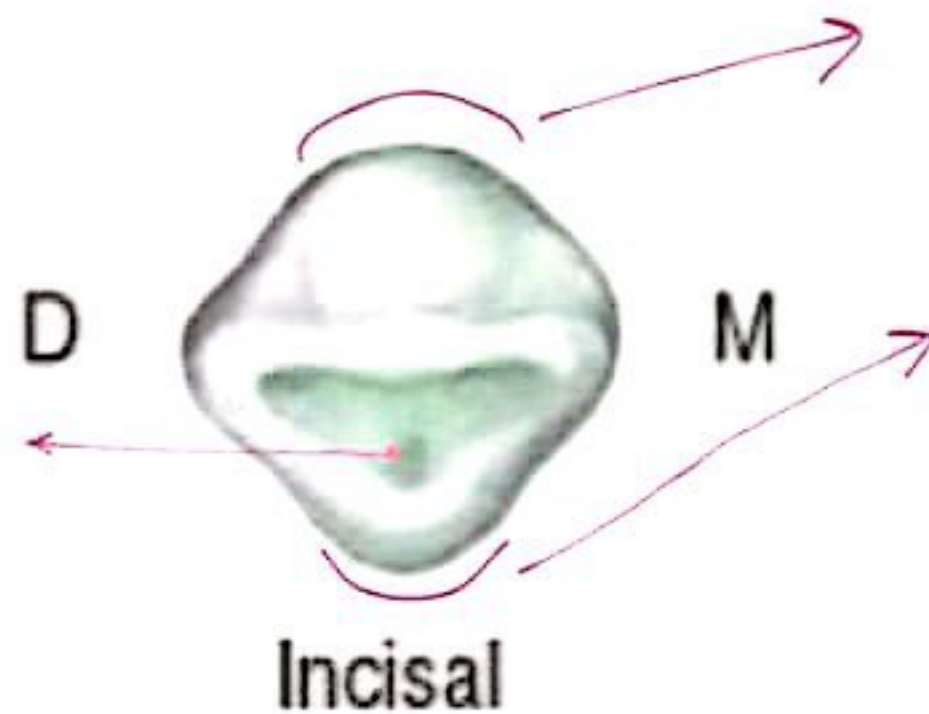

Distal

Root • Distal surface is slightly more convex than mesially

Curvature of cervical line is less in depth than on the mesial side

when palatal pit is present it's located in the depth of the lingual fossa.

labial and lingual outline are more rounded than UCI.
