

Dental Anatomy 1

Questions on chapter 1
By: Omar zein

Questions

1) The parotid papilla is observed between:

- Upper first & second molar
- Upper second & third molar
- Upper first & second Premolar
- On the lower surface of the tongue

2) Upper 6 always has Tubercle of carabelli:

- True
- False

3) In gingival recession patient, the clinical crown:

- Is longer than the anatomical crown
- Is shorter than the anatomical crown

Questions

4) Developmental grooves are short, linear depressions found usually on the occlusal surface and don't represent union of lobes:

- True
- False

5) How do we can distinguish between second and third molar:

- The third molar has a higher number of supplemental grooves than the second molar
- The third molar has a lower number of supplemental grooves than the second molar

6) According to The American numbering system which one presents the lower left permanent canine:

- | | |
|-------|-------|
| - #27 | - #6 |
| - #22 | - #11 |

Questions

7) It forms the main bulk of the tooth:

- Cementum
- Pulp
- Enamel
- Dentin

8) Linear elevation found on the labial surface while the other in the buccal surface of premolars, the third found restricted on the lingual incisal third of lower canine and the fourth found on all teeth at facial cervical third:

- Labial, buccal, Cusp & cervical ridges
- Labial, buccal, lingual & cervical ridges
- Labial, marginal, lingual & triangular ridges

Questions

9) Mixed dentition starts from 6M to 12Y:

- False
- True

10) A 14 year-old person, who doesn't have any disease problems, had an examination at the dentist, How many teeth do you expect he has in the oral cavity, knowing that he hasn't had any extraction of his teeth

- 32
- 28
- 26
- 20

Questions

11) Tooth erupts in the oral cavity when its crown and root are completely formed:

- False
- True

12) The neck of tooth is the:

- Cervix
- CEJ
- Cervical line
- All of the above

13) The incisors contain mamelons and disappear in Adults only:

- True
- False

Questions

14) The distal cusp slope is longer than the mesial cusp slope in all teeth
Except Upper 4 & Upper C :

- False
- True

15) Can you arrange these structures in Ascending order of strength:

- Enamel-dentin-cementum
- Enamel-cementum-dentin
- Cementum-dentin-enamel
- Dentin-Enamel-cementum

Questions

16) The developmental & supplemental grooves both represent union of lobes:

- True
- False

17) They are responsible for the wrinkled appearance of molars:

- fissure
- Sulcus
- Supplemental grooves
- Developmental grooves

18) The hard palate ends at:

- | | |
|------------------|----------------|
| - First molar | - Second molar |
| - First Premolar | - Third molar |

Questions

19) Most of the permanent teeth start their development inside the jaw before birth:

- True
- False

20) How many junctions of the tooth tissues:

- 1
- 2
- 3
- 4

21) It can give rise to mamelons, cusp or cingulum:

- Tubercle
- Cingulum
- Lobe
- All of the above

Questions

22) The mixed dentition starts by the eruption of:

- Lower six
- Upper six
- All of the above
- None of the above

23) Linear elevation on different surfaces of the tooth:

- | | |
|------------|---------|
| - Tubercle | - Lobe |
| - Cingulum | - ridge |

24) It is called lingual cervical ridge:

- | | |
|------------|---------|
| - Tubercle | - Lobe |
| - Cingulum | - ridge |

Questions

25) Linear elevation found on the bottom of developmental groove due to incomplete fusion of primary lobes where caries usually starts:

- Supplemental groove
- Fissure
- Central fossa
- All of the above

26) Life history of the tooth is :

- Soft growth, calcification, eruption, attrition & shedding stages
- Soft growth, calcification, erosion, attrition & shedding stages
- Shedding, calcification, eruption, attrition & eruption stages

Questions

27) The permanent molars are succedaneous teeth:

- True
- False

28) Life history of the tooth is :

- Soft growth, calcification, eruption, attrition & shedding stages
- Soft growth, calcification, erosion, attrition & shedding stages
- Shedding, calcification, eruption, attrition & eruption stages

29) The cusp has pulp, dentin & enamel:

- True
- False

Questions

30) #d 5 is for:

- Permanent Upper right second premolar
- Deciduous Upper right central incisor
- Permanent Upper left second premolar
- Deciduous Upper left central incisor

31) Due to normal physiological attrition of the incisal third in deciduous incisors, mamelons worn away.

- True
- False

Questions

32) 4 year-old boy show eruption of all deciduous teeth & permanent molars:

- True
- False

33) Fissure show high caries incidence:

- True
- False

34) The periodontium consists of:

- Cementum
- Periodontal ligament
- All of the above
- Alveolar bone
- Gingiva

Questions

35) Eruption in mandible occurs after maxillary teeth:

- True
- False

36) The lower dental arch is attached to a movable bone called the mandible & Joins the skull at TMJ:

- True
- False

37) The Eruption of deciduous teeth starts by :

- | | |
|---------------------|-----------|
| - Lower A | - Lower B |
| - Upper A | - Upper B |
| - None of the above | |

Questions

38) Clinical root of the tooth is the part under the gingiva & embedded in the bone:

- True
- False

39) The corner of the mouth where the 2 lips connect is called commissure:

- True
- False

40) Ridge connect cusp tip with cingulum:

- Labial ridge
- Cervical ridge
- Cusp ridge
- Lingual ridge

Questions

41) Ridges in all teeth:

- Marginal & cusp ridges
- Marginal & cervical ridges
- Triangular & oblique ridges

42) Shedding is the pathological loss of deciduous teeth & their subsequent replacement by permanent teeth:

- True
- False

Questions

43) Choose the correct statement:

- The soft palate is sometimes redder than hard palate
- Uvula is a flesh structure hanging from the center of posterior border of hard palate
- The end of soft palate is opposite to the third molar
- The hard palate is sometimes redder than the soft palate

44) In case of swollen gingiva, the clinical crown is longer than the anatomical crown:

- True
- False

45) It's important for children to eat on both sides of the mouth for proper facial development:

- True
- False

Questions

46) Which structure of tooth would you expect to have more calcium content:

- Dentin
- Cementum
- Enamel

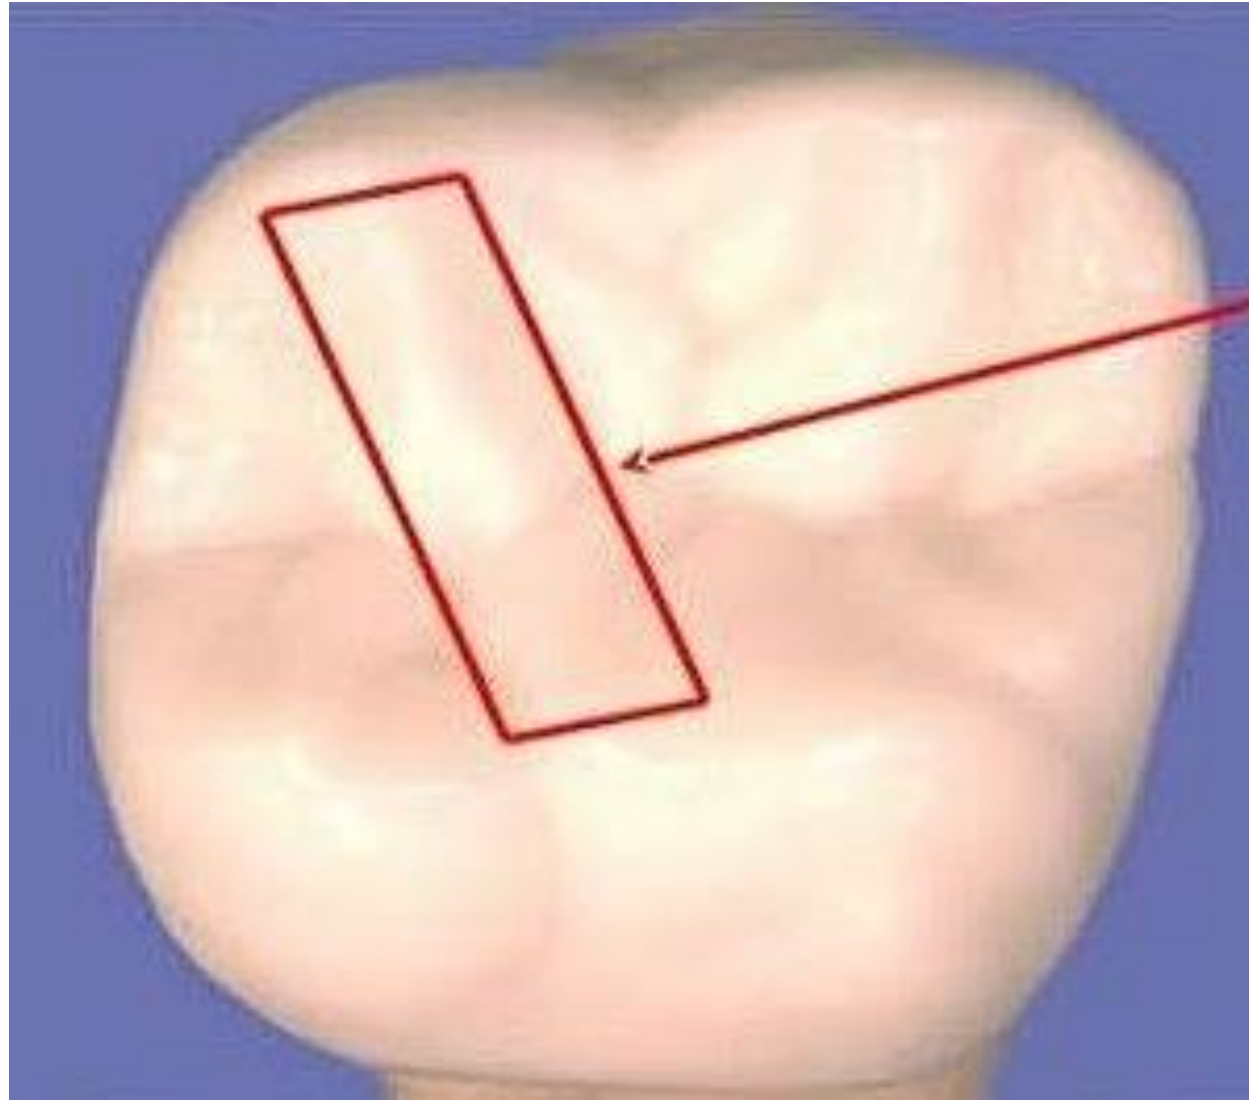

47) The predecessor of U4 is deciduous upper first premolar

- True
- False

In this photo, you can see

Name the additional structure comes out of the root canal
