**Choose the correct answer:**

**(14 marks)**

**1. The distal contact area is more cervically located than the mesial one in all incisors EXCEPT:**

- a. Upper central incisor.
- b. Upper lateral incisor.
- c. Lower central incisor.
- d. Lower lateral incisor.

**2. Which of the following refers to non-succedaneous teeth?**

- a- Deciduous molars.
- b- Permanent molars
- c- Premolars
- d. permanent incisors.

**3. Which premolar has more than one occlusal outline?**

- a. Upper first premolar.
- b. Lower first premolar.
- c. Upper second premolar.
- d. Lower second premolar.

**4-Which of the following teeth are characterized by having rounded incisal angles?**

- a- Upper central incisor.
- b- Upper lateral incisor.
- c- Lower central incisor.
- d- Lower lateral incisor.

**5- Cone-shaped centralized root could be found on:**

- a- Upper central incisor.
- b- Upper lateral incisor.
- c- Lower central incisor.
- d- Lower lateral incisor.

**6-In the Two-digit numbering system, the lower left second premolar is written as:**

- a. #35.
- b. 35.
- c. #20.
- d. 25.

**7- The meeting between three adjacent surfaces on a tooth is called:**

- a. Point angle
- b. Line angle.
- c. Cusp tip.
- d. Lingual ridge.

**8-Which of the following has multiple supplemental grooves?**

- a. Maxillary first premolar.
- b. Mandibular first molar.
- c. Maxillary second premolar.
- d. Mandibular first premolar.

**9. Which one of the following teeth (considering Universal tooth numbering system) is most likely to have a prominent lingual ridge and two lingual fossae?**

- a. # 6
- b. # 3
- c. # 22
- d. # 31

**10- Most of the teeth are usually developed from:**

- a- Three lobes
- b- Four lobes
- c- Five lobes
- d- Six lobes

**11- Which ridge of the following are found in all teeth?**

- a. Labial ridge.
- b. Buccal ridge.
- c. Cervical ridge.
- d. lingual ridge.

**12-Which of the following premolars has a short central developmental groove and thick marginal ridges?**

- a. Maxillary first.
- b. Maxillary second.
- c. Mandibular first.
- d. Mandibular second.

**13.Which of the following is a linear depression?**

- a. Fossa.
- b. Fissure.
- c. Pit.
- d. Sulcus.

**14. If an adult has a gingival recession, the clinical crown will be:**

- a. Shorter than the anatomical crown.
- b. Longer than the anatomical crown.
- c. Equal to the anatomical crown.
- d. Equal to the anatomical root.

**Write your correct answers in the box below**

|    |    |     |     |     |     |     |
|----|----|-----|-----|-----|-----|-----|
| 1- | 2- | 3-  | 4-  | 5-  | 6-  | 7-  |
| 8- | 9- | 10- | 11- | 12- | 13- | 14- |

**Complete the following: (3 marks)**

1- On the lingual aspect of premolars, the maximum convexity is located at the.....third, except for the lower second premolar, where the maximum convexity is located at the..... third.

2- Mixed dentition period starts from ..... to .....

3- The geometrical outline of the incisal aspect of upper central incisor is .....

4- .....is called king of fracture.

**State true (T) or false (F) and correct the false: (3 marks)**

1- Transverse ridge could be seen on the occlusal aspect of upper first premolar. ( )

2- The palatal pit is a characteristic feature of the upper lateral incisor. ( )

3- Upper first premolar is characterized by mesio-lingual developmental groove. ( )

**Best Wishes for Everyone**
